

Difference from Data Warehouse:

- Data Lake stores structured, semi-structured, and unstructured data.
- Data Warehouse stores mostly structured and processed data.

When businesses use it: When they need to store large amounts of raw data for future analysis and machine learning.

④ What is a Data Mart?

A Data Mart is a smaller section of a data warehouse designed for specific department such as finance or sales.

Users: Business analysts, managers, and departmental teams.

Difference between Structured, Semi-Structured, and Unstructured Data.

⑤ Structured Data: Organized in rows and columns.

- Example: Employee database.

Semi-Structured Data: Has some organization but not fixed tables.

- Example: JSON files.

Unstructured Data: No predefined format.

- Example: Videos, images, Emails.
